

CS 310 PROJECT STEP 2: WIREFRAME DESIGN

Login page and Interest page: The user will be asked to write his username and password. After that the backend will check if everything is alright and allow the user to access his student profile or/and his club profile. If the user is a first time user then he will be prompted to write his interests and bio, then his/hers username and password. We also have a Forgot Password in case the user forgets the password but that page has not been generated yet.

Main page: The posts page shows the posts that clubs send with their like and comment buttons. At the top there are 24 hour activity reminders. Both can slide to show more of the posts and reminders.

Side page: The side page could open from three lines at the top of the pages which is a place that provides access to each section.

Profile Pages: There will be two versions of profile pages. The Student profile page will show a profile picture and user_name. Club profile page will show profile picture and club_name and all posts made by the club.

Setting Page: User details can be edited from the settings page. Users can change their username, date of birth and other details. They can also change their profile picture. After tapping their profile pic, they will be directed to a page where they can either take a photo from their camera or choose a photo from their gallery.

Posting pages: The posting page includes a frame that displays photos and videos from the device. After clicking the “Next” button, a page where more editing features are displayed shows up. This page allows the user to add more details about the post. “Edit Post” button allows the user to go back to the previous page and edit the content. The “Share” button shares the post.

Calendar Pages: A whole month will be shown on the screen. Each activity on each day will be accessible as little icons you can tap on. The icons will differ in their designs based on the user's attendance to the event. Every day will be clickable and when clicked, it will show the events happening on that day. Users will be able to add events to their calendar.

Comments Pages: After pressing the comments button on any of the posts, the user will be redirected to the comments page where comments will be displayed for that specific post. They will have a box where they can press which will expand where they can write text, change the font and size, and choose the color of the text. After clicking post, their comment will be added to the top where all comments are sorted from earliest at the bottom to newest at the top.

Login page and Interest page → Eldar Ismayilzada

Main and side pages → Ceyda Balci

Profile pages → Özge Durmuş

Settings page → Tural Abdulla

Posting pages → Sena Yolcu

Comment pages → Tural Abdulla

Calendar pages → Aylin Gul Aksu
